REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The instant application discloses a polyphase filter and communications system comprising this polyphase filter. A search of the prior art failed to teach a polyphase filter comprising; "a first variable resistance separate from the first RC network and the second RC network, the first variable resistance connected across the first output" along with the remaining limitations of claim 29. Nor does the prior art teach a polyphase filter comprising; "a first variable resistance connected across the first output and a second variable resistance connected across the second output, the first variable resistance separate from the first RC network and the second variable resistance separate from the second RC network" along with the remaining limitations of claim 41. The prior art also fails to teach a communication system comprising; "a first phase splitting filter comprising a first RC network, the first phase splitting filter configured to provide a first output; a second phase splitting filter comprising a second RC network, the second phase splitting filter configured to provide a second output, a first variable resistance separate from the first RC network and the second RC network,, the first variable resistance connected across the first output" along with the remaining limitations of claim 52. Nor does the prior art teach a polyphase filter, comprising: a first phase splitting filter comprising a first RC network, the first phase splitting filter configured to provide a first output, the first RC network including a first resistor in series connection with a first capacitor, the first resistor and the second resistor directly connected together at a first node; a second phase splitting filter comprising a second RC network, the second phase splitting filter configured to provide a second output, the second RC network including a second resistor in series connection with a second capacitor, the second

resistor and the second capacitor directly connected together at a second node; a first variable resistance separate from the first RC network and the second RC network, the first variable resistance connected across the first output, the first variable resistance connected to the first node” along with the remaining limitations of claim 56.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
